

Incoming 4th Grade

Super Summer

Worksheet Packet

Dear Families,

Students will need to have mastered the multiplication facts up to 12 x 12 in order to be successful in 4th grade math and beyond. This packet has timed multiplication sheets to help keep those facts fresh in your child's mind. If they are still struggling with their facts there are many online resources and apps for tablets that can help. Games such as Yahtzee that use multiplication for scorekeeping are fun practice as well.

This packet also includes practice pages that should keep 3rd grade math concepts mastered and ready for scaffolding next year. Please have your child do a little each day and turn it in on the first day of school.

God bless your summer.

Compare Numbers

You can use a place-value chart to compare numbers.

hundreds	tens	ones
1	3	6
1	5	2

↑
same

↑
3 tens < 5 tens

> means "is greater than"
< means "is less than"
≠ means "is not equal to"

Because 3 tens is less than 5 tens, $136 < 152$.

Here is one way to remember the symbols for comparing.

The duck always eats the greater number.

Compare. Write >, <, or = for each ○.

1. 24 ○ 27

2. 43 ○ 83

3. 98 ○ 98

4. 50 ○ 15

5. 162 ○ 157

6. 105 ○ 102

7. 170 ○ 178

8. 196 ○ 214

9. 83 ○ 113

10. 742 ○ 724

11. 846 ○ 846

12. 689 ○ 1,689

13. 1,010 ○ 1,001

14. 2,514 ○ 3,120

15. 4,023 ○ 3,965

16. 5,438 ○ 9,312

17. 240 ○ 204

18. 2,195 ○ 2,195

19. 400 ○ 4,000

20. 2,954 ○ 2,945

Round Two-Digit and Three-Digit Numbers

Round a number to the nearest ten.

127

Step 1. Find the tens place.

127

Step 2. Look at the digit to the right of the tens place.

127

Step 3. If the ones digit is 5 or greater, round the ten to the next greater ten.

The ones digit is greater than 5, so change the tens digit by increasing it by 1: $2 + 1 = 3$.

$7 > 5$; so round 127 to 130.

Round a number to the nearest hundred.

127

Step 1. Find the hundreds place.

127

Step 2. Look at the digit to the right of the hundreds place.

127

Step 3. If the tens digit is 5 or greater, round the hundred to the next greater hundred.

The tens digit is less than 5, so do not change the hundreds digit.

$2 < 5$; so round 127 to 100.

Round each number to the nearest ten.

1. 134

2. 42

3. 381

4. 509

5. 75

6. 96

7. 735

8. 485

9. 613

10. 258

Round each number to the nearest hundred.

11. 278

12. 514

13. 452

14. 805

15. 382

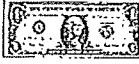

Value of Money

Dollars, dimes, and pennies each have different values. Their values can be shown using places.

- 1 dollar = 100 cents
- 1 dime = 10 cents
- 1 penny = 1 cent

two dollars and fifty-three cents

		
Dollars	Dimes	Pennies
2	5	3

Write each amount using a dollar sign and a decimal point.

5. two dollars and forty-eight cents

6. nine dollars and five cents

7. seven dollars and thirty cents

8. six dollars and twelve cents

Problem-Solving Decision: Estimate or Exact Answer

Before you solve any problem, you must decide if you need to find an exact answer or an estimate. Looking for certain words in the problem can help you decide.

Problem An ostrich weighs 325 pounds. An emu weighs 88 pounds. About how much do the two birds weigh altogether?

Think: The word "about" in the question tells you that you can estimate to solve the problem.

$$\begin{array}{r} 325 + 88 \\ \downarrow \quad \downarrow \\ 300 + 90 = 390 \end{array}$$

Solution: The ostrich and an emu weigh about 390 pounds altogether.

Problem An emu is 66 inches tall. An ostrich is 24 inches taller than the emu. How tall is the ostrich?

Think: The question asks "how tall," not "about how tall." So, you need an exact answer to solve the problem.

$$66 + 24 = 90$$

Solution: The ostrich is 90 inches tall.

Problem Solving

Tell whether you need an exact answer or an estimate for each problem. Solve.

- Ostriches lay the largest eggs on Earth. An ostrich egg can weigh up to 56 ounces. Approximately how much do two ostrich eggs weigh together?

Show your work.

- At full speed, an emu can run 30 miles per hour. At that speed, how far can an emu run in 3 hours?

Estimate Differences

Estimate $52 - 38$.

To estimate, round each number to its greatest place.

Because each number has 2 digits, round to the *tens* place.

The number 52 is closer to 50 than 60.

52 rounds to 50

The number 38 is closer to 40 than 30.

38 rounds to 40

$$\begin{array}{r} 52 \rightarrow 50 \\ -38 \rightarrow -40 \\ \hline 10 \end{array}$$

$52 - 38$ is *about* 10.

Round each number to the greatest place. Then subtract.

1. $\begin{array}{r} 38 \\ -21 \\ \hline \end{array}$

2. $\begin{array}{r} 58 \\ -32 \\ \hline \end{array}$

3. $\begin{array}{r} 681 \\ -605 \\ \hline \end{array}$

4. $\begin{array}{r} \$3.11 \\ -1.99 \\ \hline \end{array}$

5. $63 - 36$

6. $88 - 29$

7. $721 - 398$

8. $\$8.14 - \4.11

Name _____ Date _____

Multiply With 5

You can use different ways to multiply 6×5 .

You can skip count by 5s until you say 6 numbers.

Say: 5 10 15 20 25 30

You can use repeated addition.

$$5 + 5 + 5 + 5 + 5 + 5 = 30$$

$$\begin{array}{r} 5 \\ \times 6 \\ \hline 30 \end{array}$$

Find each product.

1. $\begin{array}{r} 4 \\ \times 5 \\ \hline \end{array}$

2. $\begin{array}{r} 5 \\ \times 2 \\ \hline \end{array}$

3. $\begin{array}{r} 3 \\ \times 5 \\ \hline \end{array}$

4. $\begin{array}{r} 7 \\ \times 5 \\ \hline \end{array}$

5. $\begin{array}{r} 5 \\ \times 5 \\ \hline \end{array}$

6. $\begin{array}{r} 5 \\ \times 4 \\ \hline \end{array}$

7. $\begin{array}{r} 2 \\ \times 5 \\ \hline \end{array}$

8. $\begin{array}{r} 6 \\ \times 5 \\ \hline \end{array}$

9. $\begin{array}{r} 5 \\ \times 3 \\ \hline \end{array}$

10. $7 \times 5 = \underline{\quad}$

11. $8 \times 5 = \underline{\quad}$

12. $5 \times 2 = \underline{\quad}$

13. $5 \times 9 = \underline{\quad}$

14. $5 \times 6 = \underline{\quad}$

15. $5 \times 4 = \underline{\quad}$

16. $5 \times 7 = \underline{\quad}$

17. $5 \times 3 = \underline{\quad}$

18. $9 \times 5 = \underline{\quad}$

Use with text pages 216-217.

Problem-Solving Decision: Multistep Problems

Jill walked 6 miles on Monday and 5 miles on Wednesday. Her goal is to walk 15 miles each week. How many miles does Jill have left to walk to meet her goal?

<p>Step 1 Find the number of miles Jill walked. You are looking for a total, so add.</p> <p>1.</p> <table style="margin-left: 20px;"> <tr> <td style="text-align: right;">6</td> <td>←miles walked on Monday</td> </tr> <tr> <td style="text-align: right;">+5</td> <td>←miles walked on Wednesday</td> </tr> <tr> <td style="text-align: right;">_____</td> <td>←total miles walked</td> </tr> </table>	6	←miles walked on Monday	+5	←miles walked on Wednesday	_____	←total miles walked	<p>Step 2 Find the number of miles Jill still needs to walk. Subtract to find the difference.</p> <p>2.</p> <table style="margin-left: 20px;"> <tr> <td style="text-align: right;">15</td> <td>←goal</td> </tr> <tr> <td style="text-align: right;">_____</td> <td>←total miles walked</td> </tr> <tr> <td style="text-align: right;">_____</td> <td>←miles left to walk</td> </tr> </table>	15	←goal	_____	←total miles walked	_____	←miles left to walk
6	←miles walked on Monday												
+5	←miles walked on Wednesday												
_____	←total miles walked												
15	←goal												
_____	←total miles walked												
_____	←miles left to walk												

3. Solution: Jill has _____ left to walk.

Solve each problem.

Show your work.

4. There are 12 students in the Hiking Club. Each student paid dues of \$12. If the club spent \$122, how much money is left?

5. James brought four 8-ounce bottles of water for a hiking trip. He drank 28 ounces of water. How many ounces of water are left?

6. Tony hiked for 5 hours in the mountains. Elaine hiked in the mountains for 3 times as long. How much total time did Tony and Elaine hike in the mountains?

Algebra: Division Rules

Use related multiplication facts to discover special rules for dividing with 0 and 1.

When any number except 0 is divided by itself, the quotient is 1.

$$4 \div 4 = \square$$

Think: $4 \times \square = 4$

$$4 \times 1 = 4$$

So $4 \div 4 = 1$.

When any number is divided by 1, the quotient is the dividend.

$$4 \div 1 = \square$$

Think: $1 \times \square = 4$

$$1 \times 4 = 4$$

So $4 \div 1 = 4$.

When 0 is divided by any number except 0, the quotient is 0.

$$0 \div 4 = \square$$

Think: $4 \times \square = 0$

$$4 \times 0 = 0$$

So $0 \div 4 = 0$.

You cannot divide any number by 0.

$$4 \div 0 = \square$$

Think: $0 \div \square = 4$

No number can be placed in the box to make a true sentence.

So, 4 cannot be divided by 0.

Divide.

1. $7 \div 1$ _____

2. $8 \div 8$ _____

3. $0 \div 5$ _____

4. $0 \div 2$ _____

5. $2 \div 1$ _____

6. $7 \div 7$ _____

7. $0 \div 7$ _____

8. $9 \div 1$ _____

9. $2 \div 2$ _____

10. $6 \div 6$ _____

11. $5 \div 1$ _____

12. $0 \div 3$ _____

13. $0 \div 9$ _____

14. $4 \div 4$ _____

15. $3 \div 1$ _____

Time to Five Minutes

You can tell time by the number of 5-minute steps after or before the hour.

40 minutes after seven

20 minutes before eight

Describe each time as minutes after an hour and minutes before an hour.
